KASCO GOLF CATALOG

CLUB

Encounter an unknown club.
Choose your own clever way
of playing golf.

Quality assurance of golf clubs

(Warranty period) Two years from the day of purchase.

(Warranty information) We will repair or replace the product free of charge according to our company rules if malfunctioning of and damage to the product occur while being used properly as specified in the golf club maintenance manual and handling instructions attached to your golf club upon purchase. Please bring the product with the warranty to the dealer of purchase should you have a problem.

<Repairs for a fee> Our warranty does not cover the following.

- Products purchased more than two years ago.
- Malfunctioning of and damage caused by the user either negligently or deliberately.
- Products repaired or modified by any party other than Kasco.

●Please make sure that you receive the warranty upon purchase that has the product name, the date of purchase, and the name of the dealer written on it.

●Please remember to keep the warranty, since we would not reissue it.

Counterfeit warning

●It has been confirmed that counterfeit Kasco golf clubs have been circulating in internet shops and auction websites.

Such counterfeit products may be indistinguishable from real ones just by looking. However, their specifications and performance are different from genuine clubs, and their overall quality and safety are problematic, so there is a risk of causing accidents when using them.

●We are making efforts to counter this problem, such as requesting import suspension from Customs and by identifying and differentiating the manufacturers and distributors of counterfeit products. We would also urge our customers to take care not to purchase counterfeit products. We recommend purchasing golf clubs at reliable retailers.

●We will not be responsible for any damage caused by purchasing or using counterfeit golf clubs.

<How to distinguish genuine products from counterfeit ones>

1. A warranty is attached to genuine Kasco golf clubs.
2. The serial number is engraved on the neck of genuine Kasco golf clubs. (Figure 1)
3. An anti-counterfeit label recommended by the Japan Golf Goods Association (JGGA) is on the shaft of genuine Kasco golf clubs. (Figure 2 ~ 5)

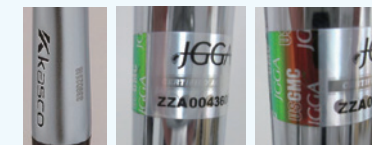

Figure 1 Figure 2 Figure 3

Figure 4 Figure 5

New groove-rule since 2010

●A new groove-rule has been implemented since January 1, 2010. General golfers can use golf clubs that conform to the previous rule valid until 2009 as conforming clubs at least until 2024. Until then, the use of clubs conforming to the new groove-rule will be required as part of competition rules only at some elite-level golf competitions, such as professional tours. (Please contact Kasco or our dealers for the details of the rule and for the information of each product.)

Figures in this catalog

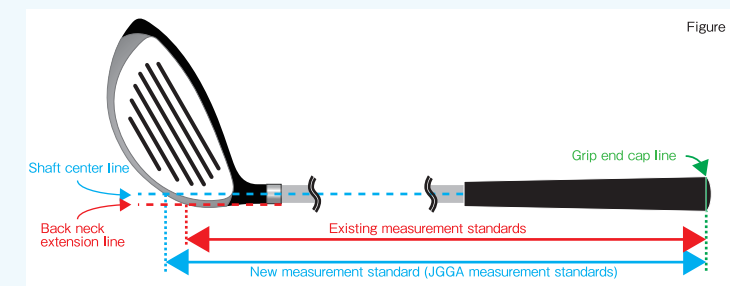

●The loft angles, lie angles, balances, head volume, and club weights provided in this catalog are design values based on the new measurement standard recommended by the JGGA (JGGA Measurement Standard). Actual measured values may slightly differ from the design values.

●Length of the clubs

We have started indicating the length of our clubs according to the JGGA Measurement Standard since the 2017 new products.

In this catalog, as for the products of 2016 or earlier, we present lengths in the previous measurement standard.

Please refer to Figure 6 for the previous measurement standard and the JGGA Measurement Standard.

LEIOS-EX

DRIVER

Large club head creates wide hitting area on the club face. Integrated sole and side of club head design creates low and deep center of gravity. Warping slit on the sole creates extra rebound performance.

LEIOS-EX DRIVER

UFO by POWER TORNADO

DRIVER

Consistently drive your tee-shot onto the fairway. Birth of DD promises a straight-ahead drive just as you aimed!

Scan for More

Large

Center of Gravity Angle **41.0°**

Good automatic head return thanks to the large center of gravity angle for a good hold.

Deep

Depth of the Center of Gravity **48.0mm**

High

Moment of Inertia **4600g·cm²**

Depth of the Center of Gravity Moment of Inertia
Good ball flight and high moment of inertia will help you get to the target.

Small

Head Volume **330ml**

Thick

Chip Diameter **9.5mm**

Short

Club Length **43.5inches**

1 Create the straight-ahead shot as intended!

Solid wing structure. Realization of a deep center of gravity and a large center of gravity angle with a weight effect.

2 Strong impact and drive with no vibration!

Thicker than typical driveshafts, reduces head vibration and puts all the power of the impact into the ball.

3 Sense of Security and Ease

Despite a small head with a projected area equivalent to 460 ml, gives you security and peace of mind when addressing the ball. The length of the shaft is 2 inches shorter than typical drivers and provides ease of swing control and shots.

Approach within pin length! Dolphin Wedge Series

Fairway, Rough, Bunker, The Dolphin Wedge will gently help you easily approach within pin length!

"Making the approach & bunker for an average golfer easy any way!" is the concept for the birth of the Dolphin Wedge, with breakthrough sales of 260,000 pieces! Those who use only one exclusively for bunkers in the beginning are increasing the number of Dolphin Wedges, such as 2, and 3, for an ample lineup for golfers of the Dolphin Wedge to include as their favorites and address their weak points. A difficult approach will be gently and easily changed to approaching within pin length.

Approach within pin length from 100 yards!

Swing through without opening the face!

Choose from 4 models

Semi-gooseneck type

DW-120G

- 44° 48° 50° 52° 54°
- 56° 58° 60° 64°

Stops duffing and sticking through the function of the [Quad Sole] without opening the face. Semi-Gooseneck with better ball hold

Black Color in the Lineup Ladies' Models in the Lineup

- For persons who
- Love the gooseneck
 - Have gooseneck irons
 - Want to aim at the green with good impact and achieve stability of the trajectory.

Straight Neck Type

DW-118

- 48° 50° 52°
- 56° 58° 60° 64°

[Quad Sole] works in such a way that head duffing and sticking are prevented even if swung similar iron.

Black Color in the Lineup Ladies' Models in the Lineup Lefty Models in Lineup

- For persons who
- Love a straight neck
 - Have straight-neck irons
 - Want to aim at the green from overhead with a high launch angle

Approach within pin length from 20 yards!

Roll and bring it closer to the hole.

DRW-119

- 39°
- Roll and bring it closer to the hole.
- Carry 1 : Run 3

The swing with the [Dolphin Wave Sole] will naturally finish by simply taking it back straight; the ball rolls and stops at the closest position.

- For persons who
- Want a secure approach to the green
 - Do care about chippers but hesitate to use one.
 - Rolling approach is the weak point.

Raise and bring it closer to the hole.

DFW-119

- 55°
- Raise and bring it closer to the hole.
- Carry 1 : Run 1

The swing with the [Dolphin Wave Sole] will naturally finish by simply taking it back straight; the ball will softly loft and stop at the closest position.

- For persons who
- Want a secure approach to the green
 - Do care about chippers but hesitate to use one.
 - Lofting approach is the weak point.

Approach within pin length from 100 yards! Dolphin setting

In order to be confident on a gentle, easy approach, we recommend including 2-4 dolphin wedges.

With a PW of 38-40°

Setting 1: 3 Wedges +44° +50° +56° or +44° +48° +54° +58°

With a PW of 41-43°

Setting 2: 2 Wedges in addition to PW +50° +56° or +48° +52° +56° or +48° +54° +58°

With a PW of 44-46°

Setting 3: 2 Wedges in addition to PW +50° +56° or +52° +58° or 3 Wedges in addition to PW +50° +54° +58°

Never make a pinch a real pinch! Add one that is useful in a bunker or for lobbing!

+60° or +64°

Number one recommendation for those whose bunker shot is a weak point. Useful for getting out of the bunker or for high bunker shots, for lobbed shots over a bunker as well.

Approach within pin length from 20 yards! Number one recommendation for those who want to brush up their approach.

Roll and bring it closer to the hole DRW-119 39°

Raise and bring it closer to the hole DFW-119 55°

The driving distance is readily grasped with the length of the stroke, and directionality is easy to match; hitting without fear of failure from 20 yards.

DOLPHIN IRON

IRON

Inherits the low friction of the dolphin wedge. The sole shape prevents missed shots caused by duffing, and reduces the loss of distance.

Explainer video

Demonstration of the low friction of Dolphin Iron

*S shafts of Attas Iron-80S specification and Dolphin DP-151 specifications are produced on order.

DOLPHIN WEDGE DW-120G

WEDGE (SEMI-GOOSENECK)

Soft iron Nickel chrome plating Fine loop milling

Semi-gooseneck type

3.5mm
The setback of a leading edge of 3.5 mm compared to the straight neck (DW-118) Easy to address, easy to catch

Semi-gooseneck type

Loft Variation

44°	48°	50°	52°	54°
56°	58°	60°	64°	

Quad Sole functions in such a way that duffing and sticking are prevented without opening the face. Semi-gooseneck with better ball hold

[No Duffing x No Sticking] Quad sole [Reduced Shaking of Head] Heel groove

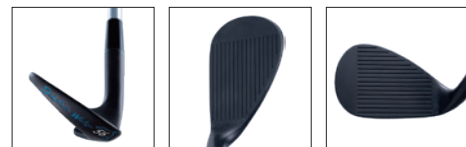

DOLPHIN WEDGE DW-120G BLK

WEDGE (SEMI-GOOSENECK)

Soft iron QPQ Fine loop milling

QPQ processing is done for the DW-120G BLK.

QPQ processing forms a hard and fine compound layer on the metal surface.

Loft Variation

44°	48°	50°	52°	54°
56°	58°	60°	64°	

Soft impact specific to no-plating

DOLPHIN WEDGE SEMI GOOSE DW-115G

Wedge (Semi-geese neck)

Soft iron Nickel chrome plating Fine loop milling

Loft Variation

44° 48° 50° 52°
56° 58° 60°

56°

Semi geese neck makes it easier to capture the ball. Now available for Dolphin Wedge.

Semi Goose Neck

The leading edge is set back 2mm further than the straight neck design. Easy to address and easy to capture.

The face is 3% larger in area with a longer scoreline, increasing comfort and directionality.

DOLPHIN RUNNING WEDGE DRW-119

DOLPHIN FLYING WEDGE DFW-119

Now, you do not need to be afraid of slopes around the green, the rough, nor shooting beyond a bunker. You can easily bring the ball closer to the pin-length from within 20 yards. Experience our magic of making approaches fun.

Roll and bring it closer to the hole

Roll and stop

Carry 1 : Run 3

Dolphin Wave Sole

makes it possible to bring the ball closer to the pin-length

The unique sole shape carries different widths in toe, center, and heel. Because you can experience natural get-out performance in many situations, you can make approaches without fear of failure!

Toe Wide head
With the wider toe, the sweet area is expanded because the weight is distributed to the direction of toe and heel. You can swing with a sense of security without fear of failure.

Center Slim body
Unnecessary resistance is reduced for the center part that contacts the ground at the time of stroke swing. It enhances the get-out performance.

Heel Heel fin
The wide part is positioned closer to the center in this design compared to traditional wedges. The unique shape naturally entices the club toward the swing direction.

Raise and bring it closer to the hole

Float and stop

Carry 1 : Run 1

Dolphin Shape - user-friendly but cool

You look cool simply by carrying it. Although it does not look like a utility club, it sure helps you when in need. Many golfers can hold it naturally.

■Crank-style neck

Resembling the crank neck of a putter, this neck shape keeps the edge of the shaft off the ground. You can easily make straight strokes like using a putter. Shanks are prevented.

■Thick grip

The thick grip stabilizes the face direction and lets you make strokes easily like using a putter. It gives you an anxiety-free hold.

■Leading edge

The rectilinear leading edge allows you to easily set the face direction to the target. Because it is also thick and round, it hardly sticks in grass and prevents chunked shots.

■High face

With the face positioned at a higher place, it performs better than a chipper in the rough and is useful in various situations.

■Heavy club

Because of the heavy weight, head fluctuation during the swing is reduced, and the club is less influenced by the grass.

DRW-119 Dolphin Running Wedge DFW-119 Dolphin Flying Wedge

Using (Dolphin's exclusive shaft made by Nippon Shaft Co., Ltd.)

Shaft: Dolphin's exclusive shaft made by Nippon Shaft Co., Ltd.

Red9/9 RP-007 (Wide Pin Type)

Putter

The Akapata wears red, an aggressive color, to assist in a straight-ahead setup and a good roll to finish without being short!
Debut of an easy direction control type Wide Pin!

Pursuit of directional accuracy!

Deep, low center of gravity
High Moment of Inertia

Scan for More

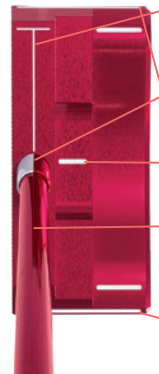

Red9/9 RP-007 (Wide Pin Type)

Straight Setup NAVI for an easy setup and positioning of the ball

Implemented Navigation Function for a Straight Setup

Red9/9 RP-007(Wide Pin Type)

T-Shape Top Line

Ease of imaging toward the target

Bi-Color Neck Line

A boundary line on the neck forms a straight line that connects from the top line, and the resulting elongated reference line will assist in addressing the ball right in front of the body.

Target Mark

Easily match the ball center

Straight Center Shaft Type

Easily set up a straight shaft centered on the face to form a right angle between the face and the direction of the eyes when looking down to provide the proper directional alignment of the shot.

Head Side Line

The head size is easily recognizable for better imagination

Straightness of posture for ball address improved by 78%

According to the results of a monitoring survey, improves the posture when addressing the ball to straight for 78% of golfers and improves the directionality of the face (hitting direction) for 55% of golfers.

BALL

Serious golf
Maximum initial speed
for a full strength shot

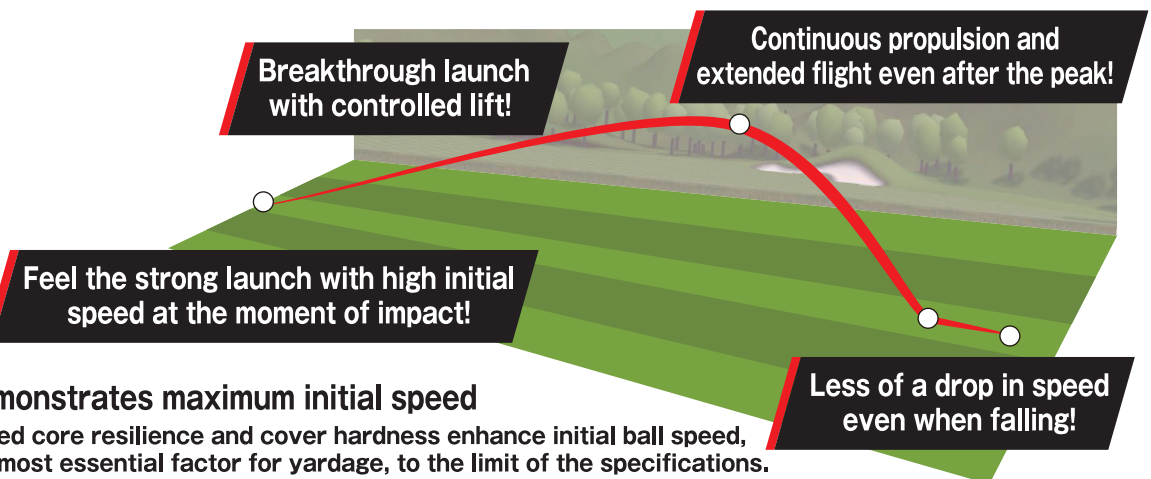

kascoAce

Pursuit of Distance Model

Maximum Initial Speed
Kasco is serious about helping you realize
amazing distance for a personal best.

Scan for More

Demonstrates maximum initial speed

Tuned core resilience and cover hardness enhance initial ball speed, the most essential factor for yardage, to the limit of the specifications.

Instantaneous conversion of impact energy to the flight of the ball!

High-Rebound Dual Core

Adoption of a dual core with high restoration force increases the core resilience to the maximum. Controls and suppresses driver spin so the ball rises easily.

Springs out softly so you can feel the flight!

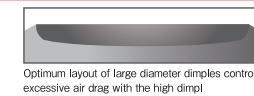

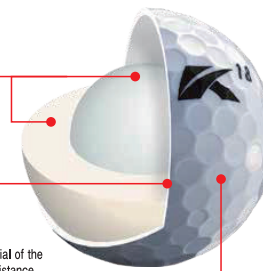

Highly resilient soft ionomer cover

Because core performance is high, the hardness of the cover has been tuned to control the potential of the initial ball speed, which exceeds the current regulations. Achieves a soft feel and long ball flight distance.

Rises easily while not popping-up, and the force continues!

Spark Dimple 272

Limited pop-up with increased forward force. Extended yardage even after the peak and less speed reduction even during the fall.

Optimum layout of large diameter dimples controls excessive air drag with the high dimple

kascoAce

Strong Fabric

You may break your best score but your gloves will never break.

Adoption of the KB Seiren Belleseime Dry® artificial suede offers excellent anti-wear and tearing strength properties. Provides stable durability unique to a material made in Japan.

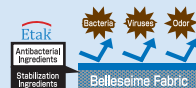

Increased durability with evolved Belleseime Dry®!

No concerns over breakage during use!

Strong to bacteria/viruses

Protection against potential dangers

The higher durability tends to increase the adhesion risk of bacteria and viruses. Tough-Fit+ provides a barrier to worrisome bacteria or viruses with the antibacterial/antiviral ingredient Etak®, which is impregnated and stabilized in the fabric. Furthermore, the treatment prevents offensive odors after use for extended periods from sweat.

Demonstrates excellent antibacterialeffect and washing durability! Offers a further long lasting effect!

Use cleanly for extended periods without worry!

Great lineup of sizes

Perfect Fitting, Increased Yardage

For prevention of lost yardage due to the gloves, the fine size lineup provides a solution to any concerns about sizes.

Resolves the concern on sizes!

First in Market Sizes offered with increments of 0.5 cm

White Black Red

Supports a natural grip!

Less gripping load provided by the near grip hand shape as if gripped with bare hands will not require excessive force for holding as when using the typical gloves.

Looks smooth and fits perfectly! Provides a long lasting holding force!

Increased adhesion maximizes the grip and enhances non-slip performance as achieved with Fully-Flat + No-Slip processing. The high non-slip performance provides the appropriate gripping force without requiring an excessive grip, and the holding force lasts longer. Furthermore, the reduced inner non-slip processing applied to both outside and backside of fabric enhances the sense of unity with hands.

<Palm>

ZUTTFIT®-X

ZUTTFIT®-X by Toyo Cloth for Palm. The original Kasco pattern is embossed on the artificial leather manufactured with a special process of Toyo Cloth, an epoch making material simultaneously featuring excellent non-slip performance, air permeability, durability and soft feeling.

**Grippy anyway
"Non-Slip Property"**

High tackiness (cohesive) on both the grip side (outside) and the contact side (inside) insures an adsorbing good fit. Controls the inner sliding that may occur between the hand and the glove when gripping. Furthermore, the enhanced sticking with the dimples on the outside provides upgraded grip performance. Realizes stable gripping performance even in the rain or perspiration.

**Long-preserved comfort
"Permeability & Durability"**

Proper thickness, excellent moisture/air permeability provides the comfort without dampness. With high wear resistance and excellent cost performance.

**Want to keep feeling the texture.
"Marshmallow Texture"**

Marshmallow softness where you keep feeling the texture. Enjoy the new feeling of texture generated from an entirely new processing technology.

AGGREVE

This material has a special nonporous membrane and features high moisture permeability and waterproofness. It has both moisture permeability for discharging moisture in the clothes to the outside and waterproofness for repelling rain and water drips and prevents them from penetrating into the clothes. It features comfortable wear and feel.

- Water resistance Initial 10,000mm JIS L 1092 method
- Moisture permeability 10,000g/mf JIS L 1099 method, B-1 method

kudas®

High function material with enhanced durable water repellent function brought by Toray's special water repelling technology. Durability to washing is also improved.

- The high water repelling performance deterioration resistant even when used in the rain for a long period of time.
- The high durability to washing is improved further.
- The film has improved smoothness and abrasion resistance
