# Play Golf Together

Let's golf!

New lifestyles are breathing exciting possibilities into the world of golf.

Unveiling a new stage for 2022.

Cast aside the stress of everyday life and stride down verdant fairways.

Enjoy the game of golf alongside your closest friends.

At Kasco, we consistently highlight golf's appeal with our commitment to innovation and our cultivated technology to support golfing life.

## UFO's legacy and evolution

Along with incorporating UFO technology to enable golfers to boldly attack from above, these clubs have evolved so that balls to be launched from any lie.

### ① Speed Sole

The sole features two blades. A sole that can be swung through the turf.

### ② Head shape and structure

The head is shaped with more volume on the toe side to allow golfers to hit balls with the sense that they are using an iron.

#### Universal Wing

With a deep center of gravity, a large center-of-gravity angle, and large moment of inertia, this part of the club head allows the ball to rise effortlessly and fly consistently without leading to a loss of momentum. You can still attack from above.

### ③ FalconShaft

A new 9.5 mm diameter tip design improves the flex of the shaft while maintaining directional stability. Despite making the shaft thinner, we were successful in maintaining the same level of performance as the thicker shaft of the previous model.

## ① Speed Sole: Our newly designed sole

The Speed Sole is a new sole shape with two blades filling the concave space on the toe side of the sole. The small contact surface reduces resistance to zero to allow you to swing through without a loss of head speed. In addition, even when the ball sinks into the grass, the head can easily penetrate to reach the ball and the two blades prevent the head from descending too far. This allows shots to be hit with confidence.

## ② Universal Wing: Head shape and structure

A deep center of gravity and large center-of-gravity angle help to achieve solid contact and a high trajectory.

Deep center of gravity and large center-of-gravity angle

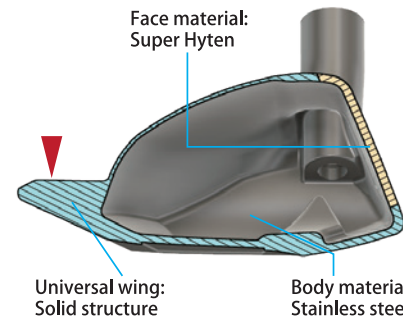

High moment of inertia

Lift and solid contact

No vibration even with off-center shots

High trajectory flight

Balls fly consistently without any loss of momentum in the club

#### Advantages

- Optimal center-of-gravity design
- Reduced aerodynamic drag
- Visual effects

The solid wing structure provides a weighting effect for an ideal center-of-gravity design. Combined with a deep center of gravity and large center-of-gravity angle, this allows balls to be hit with solid contact onto a high trajectory. In addition, the larger moment of inertia prevents a loss of momentum in the club even with off-center shots, ensures that the head will not vibrate, and produces stability in flight.

Dual Shape Crown with more volume on the toe side

## ③ FalconShaft: Our new shaft

#### For men

The outer diameter of the shaft tip has been changed from 11.0 mm in the previous model to 9.5 mm. By completely reviewing the materials comprising and structure of this shaft, we managed to reduce torque while maintaining the tip's strength. Even as we achieved torsional rigidity equivalent to that of the conventional FalconShaft to maintain directionality despite a thinner tip diameter, we improved tip flexing and the ease with which the club can be swung by reducing the bending rigidity of the tip side to that of a standard shaft. Easy to bend but hard to twist, the new long-awaited FalconShaft with a 9.5 mm tip diameter is now ready for action.

A grainy coating has been applied to the surface of the shaft.

# UFO Speed by POWER TORNADO

Utility

A good swing-through leads to greater yardage. UFO Speed is launched !

**330ml**

Short  
 Club Length  
**43.5inches**  
 (ATTAS EZ 370 spec is 43 inches)

### 1 Create the straight-ahead shot as intended!

Solid wing structure. Realization of a deep center of gravity and a large center of gravity angle with a weight effect.

### 2 Strong impact and drive with no vibration!

Thicker than typical driveshafts, reduces head vibration and puts all the power of the impact into the ball.

### 3 Sense of Security and Ease

Despite a small head with a projected area equivalent to 460 ml, gives you security and peace of mind when addressing the ball. The length of the shaft is 2 inches shorter than typical drivers and provides ease of swing control and shots.

### ATTAS EZ 370 lineup

We adopted the ATTAS-EZ to achieve powerful shots and launch balls on a high trajectory. With a quadriaxial woven fabric placed at the tip of the shaft to improve stability, this shaft is also a good match for the UFO-DD head since it has been designed to reduce head vibration and enhance control performance.

### The ATTAS EZ 370 is 43 inches long!

The 43-inch model is now available, emphasizing the ease of swing and good directionality for golfers who swing the head of the club at high speeds.

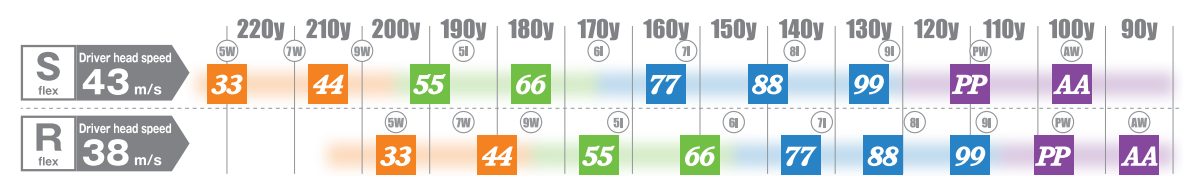

# UFO by POWER TORNADO

UTILITY

New Power Tornado covers all ranges between driver and wedge. On the green for any yardage from any lie!

## Approach within pin length from 100 yards! Dolphin setting

In order to be confident on a gentle, easy approach, we recommend including 2-4 dolphin wedges.

**Setting 1** (With a PW of 38-40°): +44° +50° +56° or +44° +48° +54° +58°

**Setting 2** (With a PW of 41-43°): +50° +56° or +48° +52° +56° or +48° +54° +58°

**Setting 3** (With a PW of 44-46°): +50° +56° or +52° +58° or +50° +54° +58°

**Never make a pinch a real pinch!**  
Add one that is useful in a bunker or for lobbing!

Number one recommendation for those whose bunker shot is a weak point. Useful for getting out of the bunker or for high bunker shots, for lobbed shots over a bunker as well.

+60° or +64°

**Approach within pin length from 20 yards!**  
Number one recommendation for those who want to brush up their approach.

Run up the ball nearer the pin. DRW-119 39°

Fly and the ball nearer the pin. DPW-119 48°

Lob and approach nearer the pin. DFW-119 55°

The driving distance is readily grasped with the length of the stroke, and directionality is easy to match; hitting without fear of failure from 20 yards.

## DOLPHIN WEDGE DW-120G

WEDGE (SEMI-GOOSENECK)

Soft iron | Nickel chrome plating | Fine loop milling

### Semi-goose-neck type

Loft Variation

44°	48°	50°	52°	54°
56°	58°	60°	64°	

Quad Sole functions in such a way that duffing and sticking are prevented without opening the face. Semi-goose-neck with better ball hold

[No Duffing x No Sticking] Quad sole

[Reduced Shaking of Head] Heel groove

## DOLPHIN WEDGE DW-120G BLK

Soft impact specific to no-plating

WEDGE (SEMI-GOOSENECK)

Soft iron | QPQ | Fine loop milling

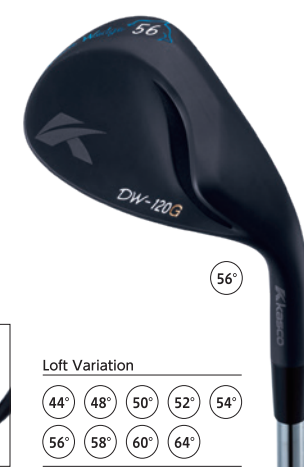

QPQ processing is done for the DW-120G BLK.

QPQ processing forms a hard and fine compound layer on the metal surface.

Ensure that you get to within 20 yards of the pin with effortless ease!

## So gentle, yet so cool! Dolphin Shape

Despite not looking like a swing trainer, this club, which is cool just to have as an option, can be very helpful indeed. Its shape allows a wide range of golfers to comfortably assume a proper stance.

**Leading edge**  
Crank-style neck  
The shape of the neck is inspired by the crank neck found on putters, with the shaft end raised off the ground. This club can be easily used to produce straight-through strokes as if you are using a putter, and helps to reduce shanking.

**Upside-down Mt. Fuji-shaped grooves**  
The shape of these grooves enhances spin performance to enable a perfect approach. In addition, fine loop milling is applied from the face to the tip of the toe to improve smoothness.

**Thick grip**  
The thick grip prevents the face from changing direction easily and makes it easier to produce straight-through strokes as if you are using a putter. Enjoy a sense of security when you assume the proper stance.

**High face**  
The face is designed to be higher than the face of chippers for greater effectiveness in the rough and to make this club more useful in a wide range of situations.

**Heavy club**  
Because of the heavy weight of the club, the head is less likely to vibrate during your swing and be at the mercy of the grass.

## Dolphin Wave Sole. Designed to help you avoid duffing the ball!

The unique shape of this sole permits the sole to naturally slide through the turf. Approach without fear of failure.

**Avoid duffing! Point 1**  
**Wide heel fin**  
A unique wide shape that naturally guides the club in the direction of the swing. The wide part of the wedge is designed to be closer to the center than conventional wedges.

**Avoid duffing! Point 2**  
**Slim body for sliding through the turf**  
In order to reduce unnecessary drag, the center, which is placed into position during the stroke swing, has been slimmed down. Effectively slide through the turf!

**Avoid duffing! Point 3**  
**Wide toe**  
In order to enlarge the sweet zone, the toe side has been made wider and the weight has been distributed in the direction of the toe and heel. Swing without fear of failure and with peace of mind.

**Avoid duffing! Point 4**  
**A thick and round leading edge**  
The leading edge is thick and round to prevent the head from hitting the ground in front of the ball and help reduce duffing. In addition, the straight shape makes it easier to align the face with the target.

## Dolphin Running Wedge 119

Run with precision!

Run up the ball nearer the pin.

Carry 1 : Run 3

## Dolphin Pitch & Run Wedge 119

Fly and run with precision!

Fly and run up the ball nearer the pin.

Carry 1 : Run 2

## Dolphin Flying Wedge 119

Lob with precision!

Lob and approach nearer the pin.

Carry 1 : Run 1

アカパタ、さらに極まる。

# Red9/9 white back

アカパタ×シロ＝新直進力誕生

Straight back and straight through for a straight putt! This putter comes with features that enable the ball to roll in an optimal manner.

### Square head shape

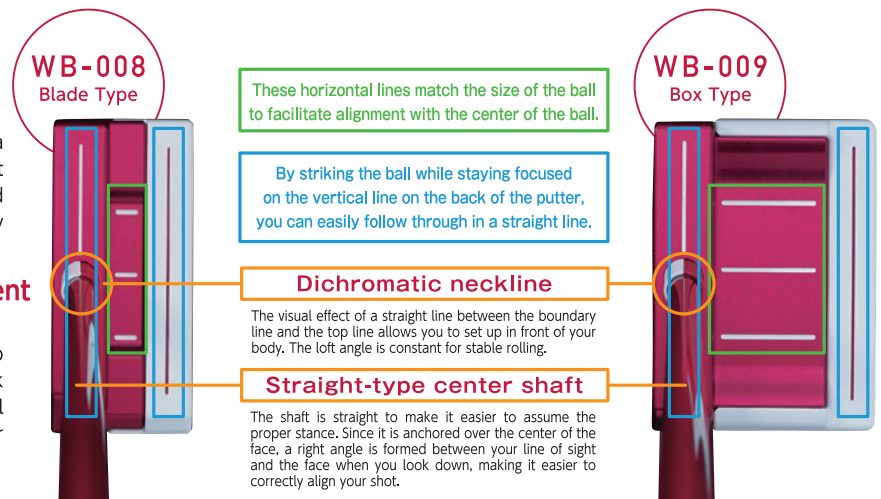

The back is white to emphasize a square shape in order to make it easier to square the putter and track it even when you are visually distracted by the afterimage effect.

### Ladder-shaped alignment aiding elements

A vertical line parallel to the top line has been added to the back of the putter. Three horizontal lines in between make it easier to align your swing.

### Rounded heel sole

A new shape has been adopted that is designed to prevent the heel side from interacting with the turf even if the toe side lifts during the stroke. With almost no change in the height of the contact point, this putter is resistant to snagging. Mistakes are lessened even on longer putts that require a larger swing distance.

WB-008 Blade Type

These horizontal lines match the size of the ball to facilitate alignment with the center of the ball.

By striking the ball while staying focused on the vertical line on the back of the putter, you can easily follow through in a straight line.

Dichromatic neckline

The visual effect of a straight line between the boundary line and the top line allows you to set up in front of your body. The loft angle is constant for stable rolling.

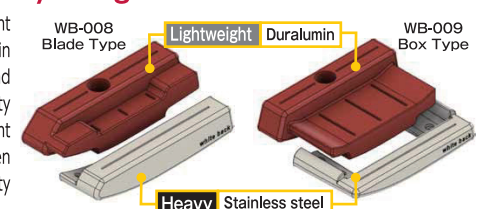

Straight-type center shaft

The shaft is straight to make it easier to assume the proper stance. Since it is anchored over the center of the face, a right angle is formed between your line of sight and the face when you look down, making it easier to correctly align your shot.

WB-009 Box Type

### Deep center-of-gravity design

A new head combines different materials: lightweight Duralumin (specific gravity of 2.8 g/cm<sup>2</sup>) and heavier stainless steel (specific gravity of 7.9 g/cm<sup>2</sup>). A structure with weight placed along the back has been adopted for a deeper center of gravity and improved rolling performance.

WB-008 Blade Type

Lightweight Duralumin

WB-009 Box Type

Heavy Stainless steel

Choose from an array of head types! **Red9/9** white back series

Further maximized directionality. **Deep center of gravity**

For those who find short putts challenging

# KASCOAce

Maximum Initial Speed  
Kasco is serious about helping you realize amazing distance for a personal best.

Pursuit of Distance Model

Scan for More

## Demonstrates maximum initial speed

Tuned core resilience and cover hardness enhance initial ball speed, the most essential factor for yardage, to the limit of the specifications.

**Instantaneous conversion of impact energy to the flight of the ball!**

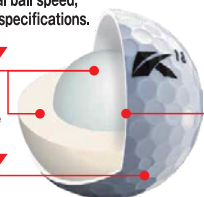

### High-Rebound Dual Core

Adoption of a dual core with high restoration force increases the core resilience to the maximum. Controls and suppresses driver spin so the ball rises easily.

**Rises easily while not popping-up, and the force continues!**

### Spark Dimple 272

Limited pop-up with increased forward force. Extended yardage even after the peak and less speed reduction even during the fall.

Optimum layout of large diameter dimples controls excessive air drag with the high dimple

**Springs out softly so you can feel the flight!**

### Highly resilient soft ionomer cover

Because core performance is high, the hardness of the cover has been tuned to control the potential of the initial ball speed, which exceeds the current regulations. Achieves a soft feel and long ball flight distance.

## kascoAce

3 piece ball	2 cores + 1 cover
Number of dimples	272
Optimum head speed	36~48m/s
Feeling / driver	Soft
Feeling / approach	Soft
Spin performance / driver	Less

# KIRA DIAMOND

Diamond brilliance. Blissful feel and long yardage.  
KIRA ball flies, stops, and remains visible.

KIRA High End Model

Scan for More

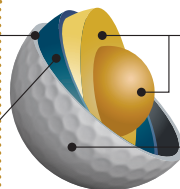

### High Brightness W-Cover

#### Soft ionomer cover

Delivers a soft feel as your club hits the ball and high-spin performance for approach shots.

#### High-rebound cover with bright materials

Provides enhanced rebound performance and less excessive spin when launched with a driver.

### Highly elastic dual core

Delivers a soft feel as your club hits the ball and enhanced rebound performance. Launch the ball higher with a lower spin rate.

### Newly designed for a stronger trajectory and greater penetration Spark Dimple 272

Accommodates a wide spin range and increases distance with a strong trajectory that extends from the peak.

## KIRA DIAMOND

Dozen	*Made in Japan	

\*Ball number : 1-3-5-7

KIRAKIRA Value Eight Pieces: One each of KIRASTAR/yellow, red, white, and aqua and KIRASTAR-V/yellow, red, white, and aqua are included.

# KASCO ROYAL

Worthy of the name and shows the running performance and pure gold shine as well.

Fancy Box creating an elegant Japanese look with pongee feel

\*Included bookmarker/ message card

## KIRA ROYAL 3

5 piece ball	3 cores + 2 covers	
Number of dimples	252	
Optimum head speed	25	30 35 40 45 50
Feeling / driver	Extra-soft	Soft Regular
Feeling / approach	Extra-soft	Soft Regular
Spin performance / driver	Less	Medium Much
Spin performance / approach	Less	Medium Much
Trajectory	Low	Medium Mid-high High
OWN NAME	1/2D *Made in Japan	

\*Ball number : 1-5-7  
Kasco uses fullerene (nanom<sup>®</sup>) made by Frontier Carbon Corporation.

Elastomer Core contains Nano-Fullerene

Awarded with the Nobel Prize in Chemistry <Fullerene> brings about the softer hitting feeling.

©Schematic Molecular Structure of Fullerene

High Trajectory Big Dimple 252

Realizing a high trajectory with Big Dimples

Highly resilient Core

Generates a high repulsion force and enhances the initial speed of the ball.

Pure Gold Coated High Repulsion Cover containing Lame

Controls excessive spinning and increases resilience. 24K Pure Gold Lame promotes premium impressions

Highly resilient ionomer cover

Further increases the initial speed of the ball with high resilience force.

High Density Core

Increased initial spin performance by the increased specific weight

# HC-802

Non-Conforming Ball

High resilience and less air resistance for increased ball flight.

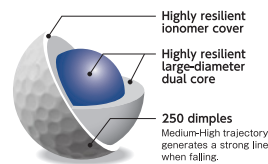

## HC-802

2 piece ball	1 core + 1 cover	
Number of dimples	338	
Optimum head speed	30/ms~	
Feeling / driver	Regular	
Feeling / approach	Regular	
Spin performance / driver	Medium	
Spin performance / approach	Medium	
Trajectory	Mid-high	
Dozen	*Made in Taiwan	

\*Ball number : 11-33-55-77

Freed from the stress of rain. Water-repellent coating will repel the rain reducing resistance when driving. Gains yardage by carrying.

## Weather Free: Rain

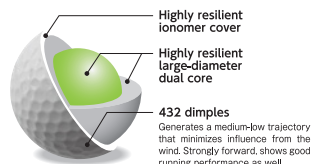

3 piece ball	2 cores + 1 cover	
Number of dimples	250	
Optimum head speed	25	30 35 40 45 50
Feeling / driver	Extra-soft	Soft Regular
Feeling / approach	Extra-soft	Soft Regular

Dozen	*Made in Taiwan

# TOUGH FIT+

You may break your best score but your gloves will never break! Tough to break, good size lineup, resists bacteria and viruses, and slip-resistant.

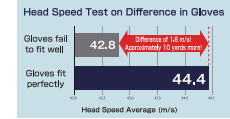

Scan for More

## Perfect Fit for Increased Yardage

If the gloves fail to fit your hands, you can lose an average 1.6 m/s of head speed. The difference converted into yardage is approximately 10 yards.

Suitable if your glove is loose at the fingertips.

- Japan-made artificial suede
- Right-hand gloves
- Larger size 27-28cm
- Cadet Short Finger
- 0.5cm Spin stretch at 0.5cm interval
- Durability
- All weather
- Free-cut wrist
- Antibacterial Antiviral
- Anti-Odor

White Black

Suitable if 22cm is tight and 23cm is loose.

- \*Belleseime Dry® is a registered trademark of KB Seiren, Ltd.

## Strong Fabric

You may break your best score but your gloves will never break.

Adoption of the KB Seiren Belleseime Dry® artificial suede offers excellent anti-wear and tearing strength properties. Provides stable durability unique to a material made in Japan.

Increased durability with evolved Belleseime Dry®! No concerns over breakage during use!

## Strong to bacteria/viruses

Protection against potential dangers

The higher durability tends to increase the adhesion risk of bacteria and viruses. Tough-Fit+ provides a barrier to worrisome bacteria or viruses with the antibacterial/antiviral ingredient Etak®, which is impregnated and stabilized in the fabric. Furthermore, the treatment prevents offensive odors after use for extended periods from sweat.

Demonstrates excellent antibacterialeffect and washing durability! Offers a further long lasting effect!

Use cleanly for extended periods without worry!

## Great lineup of sizes

Perfect Fitting, Increased Yardage

For prevention of lost yardage due to the gloves, the fine size lineup provides a solution to any concerns about sizes.

Resolves the concern on sizes!

First in Market Sizes offered with increments of 0.5 cm

Shorter finger Cadet size

# SILKY FIT

Professional-use model  
Thin and soft.  
Fits your hand.

**PURE ETHIOPIA SHEEP**  
ビュアエチオピアシープ

**Pure Ethiopian sheep**  
Abyssinian highland sheep bred in special environments are carefully selected and treated with special tanning. It has a fine texture, flexible, and soft. It fits your hand.

**Soft hook**  
Thin and tender soft hook is used. The glove can easily be attached or removed. It fits better on the back.

**Soft band**  
Leather material is pressed, and the band is thinner and softer.

**Free-cut wrist**  
Offers a more natural wrist movement and reduces discomfort when swinging.

**You can't stop touching it. Skin-like texture is the selling point.**

<b>Pure Ethiopian sheep</b> Pores are small and the surface is flat. Tight, moist skin with a delicate texture.	<b>Normal sheep (other than Ethiopia)</b> Sweat glands are large and rough. The skin looks like thick and stiff.

# Perfect FIT

Security of gripping until hole out  
V-Cut 3D gloves provide a good hold without gripping

**Supports a natural grip!**  
Less gripping load provided by the near grip hand shape as if gripped with bare hands will not require excessive force for holding as when using the typical gloves.

**18** times more gripping force than other gloves

**80** % of force by other companies

**New Technology V-Cut 3D**

No annoying wrinkles or seams when gripping!

\*Patent Pending

**Looks smooth and fits perfectly! Provides a long lasting holding force!**

Increased adhesion maximizes the grip and enhances non-slip performance as achieved with Fully-Flat + No-Slip processing. The high non-slip performance provides the appropriate gripping force without requiring an excessive grip, and the holding force lasts longer. Furthermore, the reduced inner non-slip processing applied to both outside and backside of fabric enhances the sense of unity with hands.

**Enlarged Fabric**

<b>Embossed Material</b>	<b>Common Flat Processing Material</b>	<b>New Idea Zero Slip</b>

<Palm>

**ZUTTFIT®-X**  
ZUTTFIT®-X by Toyo Cloth for Palm. The original Kasco pattern is embossed on the artificial leather manufactured with a special process of Toyo Cloth, an epoch making material simultaneously featuring excellent non-slip performance, air permeability, durability and soft feeling.

**Grippy anyway "Non-Slip Property"**

High tackiness (cohesive) on both the grip side (outside) and the contact side (inside) insures an adsorbing good fit. Controls the inner sliding that may occur between the hand and the glove when gripping. Furthermore, the enhanced sticking with the dimples on the outside provides upgraded grip performance. Realizes stable gripping performance even in the rain or perspiration.

**Long-preserved comfort "Permeability & Durability"**

Proper thickness, excellent moisture/air permeability provides the comfort without dampness. With high wear resistance and excellent cost performance.

**Want to keep feeling the texture. "Marshmallow Texture"**

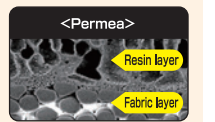

Marshmallow softness where you keep feeling the texture. Enjoy the new feeling of texture generated from an entirely new processing technology.

<Back>

**PARMIA®**  
All-weather!  
Comfortable  
without dampness!

"Permea GB" on the back side. Special processing on the surface of sponge soft layer, simultaneously air and moisture permeable, and always comfortable to use.

**COOL GLOVE**  
COOL & QUICK DRY

Incorporates a cooling material on the back of the hand  
Utimitika's Uchimizu (dotted mesh) fabric is used to deliver a cooling effect through evaporation to ensure comfort even in summer!

**1 Cooling material**  
Unitika's Uchimizu (dotted mesh) fabric

- Water-cooling effect: Evaporation-promoting fibers actively accelerate the evaporation of sweat to provide a cooling effect.
- Sweat-wicking and fast-drying properties: Made with fibers offering excellent sweat-wicking and fast-drying properties.
- UV blocking: Excellent UV-blocking properties. (UV shielding rate: 90% or higher)

**2 Non-slip and durable**  
Belleseime21+®

Excellent non-slip properties help maintain strong grip performance against rain and sweat. Also offers excellent abrasion and tear resistance for reliable durability.

**3 Keeps your hands dry and comfortable! STAY COOL**

Perforated synthetic leather delivers high breathability and comfort while helping to keep your hands dry.

Evaporative cooling Moisture-absorbing and quick drying Grip force Stays dry Blocks UV

AGGREVE

This material has a special nonporous membrane and features high moisture permeability and waterproofness. It has both moisture permeability for discharging moisture in the clothes to the outside and waterproofness for repelling rain and water drips and prevents them from penetrating into the clothes. It features comfortable wear and feel.

- Water resistance Initial 10,000mm JIS L 1092 method
- Moisture permeability 10,000g/mf JIS L 1099 method, B-1 method

kudas®

**Quality assurance of golf clubs**

(Warranty period) Two years from the day of purchase.

(Warranty information) We will repair or replace the product free of charge according to our company rules if malfunctioning of and damage to the product occur while being used properly as specified in the golf club maintenance manual and handling instructions attached to your golf club upon purchase. Please bring the product with the warranty to the dealer of purchase should you have a problem.

<Repairs for a fee> Our warranty does not cover the following.

- Products purchased more than two years ago.
- Malfunctioning of and damage caused by the user either negligently or deliberately.
- Products repaired or modified by any party other than Kasco.

- Please make sure that you receive the warranty upon purchase that has the product name, the date of purchase, and the name of the dealer written on it.
- Please remember to keep the warranty, since we would not reissue it.

**Counterfeit warning**

●It has been confirmed that counterfeit Kasco golf clubs have been circulating in internet shops and auction websites. Such counterfeit products may be indistinguishable from real ones just by looking. However, their specifications and performance are different from genuine clubs, and their overall quality and safety are problematic, so there is a risk of causing accidents when using them.

●We are making efforts to counter this problem, such as requesting import suspension from Customs and by identifying and differentiating the manufacturers and distributors of counterfeit products. We would also urge our customers to take care not to purchase counterfeit products. We recommend purchasing golf clubs at reliable retailers.

●We will not be responsible for any damage caused by purchasing or using counterfeit golf clubs.

**<How to distinguish genuine products from counterfeit ones>**

1. A warranty is attached to genuine Kasco golf clubs.
2. The serial number is engraved on the neck of genuine Kasco golf clubs. (Figure 1)
3. An anti-counterfeit label recommended by the Japan Golf Goods Association (JGGA) is on the shaft of genuine Kasco golf clubs. (Figure 2 ~ 5)

**New groove-rule since 2010**

●A new groove-rule has been implemented since January 1, 2010. General golfers can use golf clubs that conform to the previous rule valid until 2009 as conforming clubs at least until 2024. Until then, the use of clubs conforming to the new groove-rule will be required as part of competition rules only at some elite-level golf competitions, such as professional tours. (Please contact Kasco or our dealers for the details of the rule and for the information of each product.)

**Figures in this catalog**

●The loft angles, lie angles, balances, head volume, and club weights provided in this catalog are design values based on the new measurement standard recommended by the JGGA (JGGA Measurement Standard). Actual measured values may slightly differ from the design values.

●Length of the clubs

We have started indicating the length of our clubs according to the JGGA Measurement Standard since the 2017 new products.

In this catalog, as for the products of 2016 or earlier, we present lengths in the previous measurement standard.

Please refer to Figure 6 for the previous measurement standard and the JGGA Measurement Standard.
