KASCO GOLF CATALOG

# Be Crazy about Golfing.

もっとゴルフに夢中に

The joys of golf can be experienced in all sorts of moments,  
such as when you deliver a shot cleanly through the air,  
when you manage to find your way out of a hopeless bunker,  
and when you savor the glory of sinking a winning putt.

We want to see all kinds of golfers – those who are just starting out,  
those who have not played in quite some time,  
and those who are hooked on the sport – become even crazier about golfing.

Kasco is committed to supporting your golfing life  
with our inherent innovation and technological strength.

We invite you to become more passionate about golf.

DOLPHIN WEDGE  
DW-123

Red9/9 white back  
WB-013

Dolphin Wedge

Approach from all types of lies with **effortless ease.**  
Get your ball within a pin's length of the hole from anywhere within 100 yards!  
**Introducing the DW-123!**

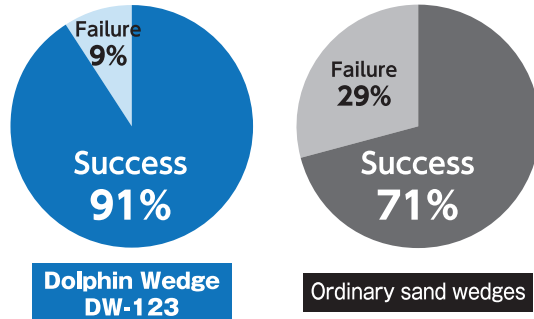

- Ideal if
- You have trouble with approach shots and bunkers.
  - It is difficult to hit open shots from bunkers.
  - You often hit duff or chunk shots.
  - You often hit thin shots out of a fear of duffing the ball.
  - You either cannot get out of bunkers or your balls fly too far out of bunkers.
  - You are just looking for an easy-to-use wedge club.

## Learn to love dealing with bunkers

Let us compare the Dolphin Wedge DW-123 and an ordinary sand wedge in terms of the rate at which balls can be hit out of bunkers. With the Dolphin Wedge DW-123, this is 20% higher.

\*Based on attempts made by 24 golfers.

## Quad-Sole X<sup>(\*)</sup> for a thorough focus on swing-through strokes

\*Patent pending

A toe-centered heel changes the bounce angle and reduces resistance when swinging the club. The entire sole works to ensure excellent swing-through strokes in any situation.

Improves swing-through

No resistance!

The bounce has been reduced to eliminate needless resistance. In addition, the central part of the toe side of the head is concave to allow sand to slip past with ease after each explosive shot.

Cut-off toe

Resistant to submergence

Escape from bunkers with ease!

A unique shape prevents the club from sinking into the sand when the user makes an explosive shot and naturally guides the club in the direction of the swing. The width of the sole is greater than that of our previous model for improved resistance to submergence. And since the center of gravity is low, it is easier to elevate the trajectory of the ball.

Heel fin

Hit balls squarely

The entire sole works even without opening up the face

When taking a bunker shot, you can still gently hit the ball without having to change your swing or otherwise think about difficult matters, such as the need to open up the face.

Does not jam

Prevents duffing!

The alpine-inspired shape of the head, which adds a bounce angle while keeping the leading edge from floating, prevents the club from jamming into the grass or sand. By also shaping the head towards the toe and heel to resemble a mountain, it is easier to prepare to hit the ball regardless of whether the lie is sloping upwards or downwards.

Pyramid shaped

No bounce-back effect

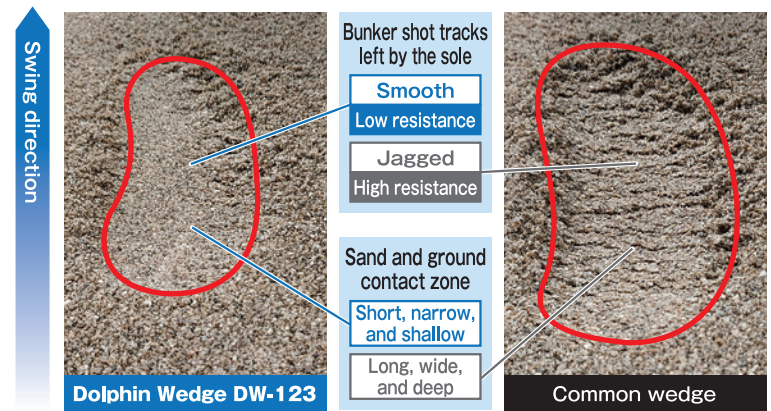

Prevents ball topping and balls from flying too far out!

By shortening the length of the head that is in contact with the ground in the toe-and-heel direction, resistance is reduced. The bounce-back effect is prevented to lessen the worry that comes from the thought that you might top the ball or cause the ball to fly too far out from the bunker. You can also get ready to hit the ball without stress even when the head might bounce off bare ground or an otherwise hard surface.

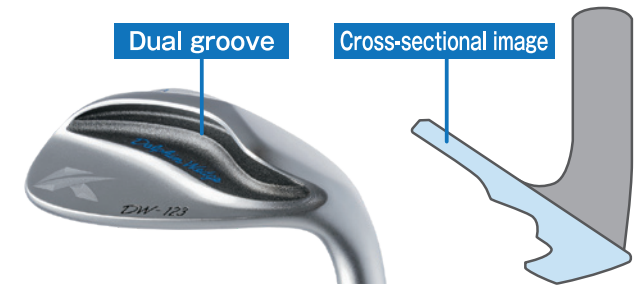

## Comparing the ability of the head to exit bunkers

We compared bunker shot tracks between the Dolphin Wedge DW-123 and a common sand wedge using a demonstration machine. The DW-123 has less sand resistance thanks to the effectiveness of its Quad Sole X structure, which allows the sole to smoothly exit bunkers in the direction of the swing.

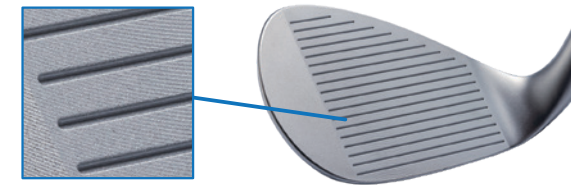

## Improved ease-of-use Dual grooves

This club head features wave-like grooves to optimally distribute weight between the sole and the back face surface. This allows the sole face to be widened and balls to be hit with greater ease. The ball-striking zone has also been thickened to enhance the feel of the club hitting a ball.

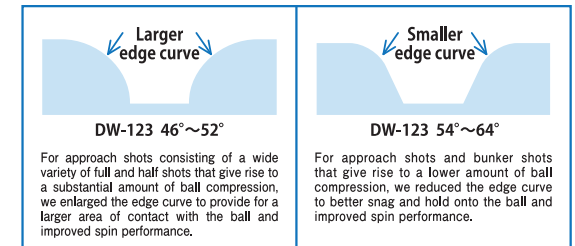

## Improved spin performance Scored-line design

Spin performance has been improved by placing scored lines closer to the leading edge. Narrowing the distance between scored lines allows the grooves to catch the ball more effectively upon contact. The size of the groove curve varies according to the club number to achieve an optimal amount of spin according to the shot that is required.

## Stable shots Fine-loop milling

Precision milling of the face surface improves the smoothness of the face surface to stabilize shots.

## Dolphin settings to get the ball within a pin's length of the hole from anywhere within 100 yards

We recommend setting up two to four Dolphin wedge clubs to be able to easily take approach shots with confidence.

If your PW is	2 wedge clubs in addition to the PW	3 wedge clubs in addition to the PW	4 wedge clubs in addition to the PW
38°-40°	Setting 1: +46° +52° +56°	Setting 1: +46° +52° +56°	Setting 1: +46° +50° +54° +58°
41°-43°	Setting 2: +50° +56°	Setting 2: +48° +52° +56°	Setting 2: +48° +54° +58°
44°-45°	Setting 3: +50° +56°	Setting 3: +50° +54° +58°	Setting 3: +48° +52° +56°

A full complement of wedge clubs is needed if you are using Strong Loft irons!

Don't let tight spots become actual tight spots! Add one club that helps for bunker and lob shots!

Highly recommended if you have trouble with bunker shots. Especially useful to escape from bunkers and deal with bunkers with a high lip. Also ideal for lob shots to get you across a bunker.

+60° or +64°

Get the ball within a pin's length of the hole from anywhere within 20 yards out! Highly recommended for those who want to improve their approach shots.

Roll and approach: DRW-119 39°

Float, roll, and approach: DPW-119 48°

Lift and approach: DFW-119 55°

Hit the ball without fear of failure from within 20 yards out since you can easily fine-tune the distance of carry with the strength of your stroke and adjust the direction of your shot.

# DOLPHIN WEDGE DW-123

Wedge (straight neck)

Soft iron Nickel chrome plated Fine-loop milling

The Quad Sole X - which is resistant to submergence, jamming, and the bounce-back effect - makes it easier to take an approach shot from any lie.

## The 119 series is useful in these situations!

Ensure that you get to within 20 yards of the pin with effortless ease!

## So gentle, yet so cool! Dolphin Shape

Despite not looking like a swing trainer, this club, which is cool just to have as an option, can be very helpful indeed. Its shape allows a wide range of golfers to comfortably assume a proper stance.

**Leading edge**  
Crank-style neck  
The shape of the neck is inspired by the crank neck found on putters, with the shaft end raised off the ground. This club can be easily used to produce straight-through strokes as if you are using a putter, and helps to reduce shanking.

**Upside-down Mt. Fuji-shaped grooves**  
The shape of these grooves enhances spin performance to enable a perfect approach. In addition, fine loop milling is applied from the face to the tip of the toe to improve smoothness.

**Thick grip**  
The thick grip prevents the face from changing direction easily and makes it easier to produce straight-through strokes as if you are using a putter. Enjoy a sense of security when you assume the proper stance.

**High face**  
The face is designed to be higher than the face of chippers for greater effectiveness in the rough and to make this club more useful in a wide range of situations.

**Heavy club**  
Because of the heavy weight of the club, the head is less likely to vibrate during your swing and be at the mercy of the grass.

## Dolphin Wave Sole. Designed to help you avoid duffing the ball!

The unique shape of this sole permits the sole to naturally slide through the turf. Approach without fear of failure.

**Avoid duffing! Point 1**  
**Wide heel fin**  
A unique wide shape that naturally guides the club in the direction of the swing. The wide part of the wedge is designed to be closer to the center than conventional wedges.

**Avoid duffing! Point 2**  
**Slim body for sliding through the turf**  
In order to reduce unnecessary drag, the center, which is placed into position during the stroke swing, has been slimmed down. Effectively slide through the turf!

**Avoid duffing! Point 3**  
**Wide toe**  
In order to enlarge the sweet zone, the toe side has been made wider and the weight has been distributed in the direction of the toe and heel. Swing without fear of failure and with peace of mind.

**Avoid duffing! Point 4**  
**A thick and round leading edge**  
The leading edge is thick and round to prevent the head from hitting the ground in front of the ball and help reduce duffing. In addition, the straight shape makes it easier to align the face with the target.

## Dolphin Running Wedge 119

Run with precision!

Run up the ball nearer the pin.

Carry 1 : Run 3

## Dolphin Pitch & Run Wedge 119

Fly and run with precision!

Fly and run up the ball nearer the pin.

Carry 1 : Run 2

## Dolphin Flying Wedge 119

Lob with precision!

Lob and approach nearer the pin.

Carry 1 : Run 1

## 抜けの良さは飛びにつながる。 ユーフォースピード

### UFO's legacy and evolution

Along with incorporating UFO technology to enable golfers to boldly attack from above, these clubs have evolved so that balls to be launched from any lie.

#### ① Speed Sole

The Speed Sole is a new sole shape with two blades filling the concave space on the toe side of the sole. The small contact surface reduces resistance to zero to allow you to swing through without a loss of head speed. In addition, even when the ball sinks into the grass, the head can easily penetrate to reach the ball and the two blades prevent the head from descending too far. This allows shots to be hit with confidence.

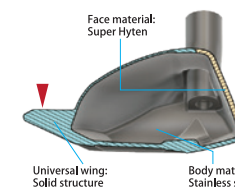

#### ② Head shape and structure

The head is shaped with more volume on the toe side to allow golfers to hit balls with the sense that they are using an iron.

#### Universal Wing

A deep center of gravity and large center-of-gravity angle help to achieve solid contact and a high trajectory.

Deep center of gravity and large center-of-gravity angle

Lift and solid contact  
High trajectory flight

High moment of inertia

No vibration even with off-center shots  
Balls fly consistently without any loss of momentum in the club

The solid wing structure provides a weighting effect for an ideal center-of-gravity design. Combined with a deep center of gravity and large center-of-gravity angle, this allows balls to be hit with solid contact onto a high trajectory. In addition, the larger moment of inertia prevents a loss of momentum in the club even with off-center shots, ensures that the head will not vibrate, and produces stability in flight.

#### Advantages

●Optimal center-of-gravity design ●Reduced aerodynamic drag ●Visual effects

#### ③ FalconShaft

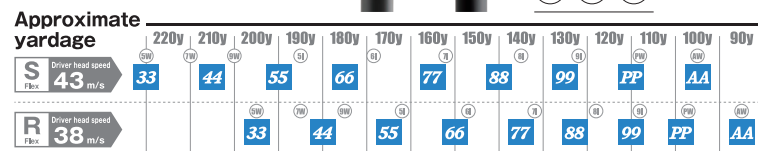

A new 9.5 mm diameter tip design improves the flex of the shaft while maintaining directional stability. Despite making the shaft thinner, we were successful in maintaining the same level of performance as the thicker shaft of the previous model.

# UFO Speed by POWER TORNADO

Utility

A good swing-through leads to greater yardage. UFO Speed is launched!

# UFO by POWER TORNADO

DRIVER

Consistently drive your tee-shot onto the fairway. UFO DD promises a straight-ahead drive just as you aimed!

<ATTAS EZ 370> Specifications

## 1 Create the straight-ahead shot as intended!

Solid wing structure. Realization of a deep center of gravity and a large center of gravity angle with a weight effect.

## 2 Strong impact and drive with no vibration!

Thicker than typical driveshafts, reduces head vibration and puts all the power of the impact into the ball.

## 3 Sense of Security and Ease

Despite a small head with a projected area equivalent to 460 ml, gives you security and peace of mind when addressing the ball. The length of the shaft is 2 inches shorter than typical drivers and provides ease of swing control and shots.

## ATTAS EZ 370 lineup

We adopted the ATTAS-EZ to achieve powerful shots and launch balls on a high trajectory. With a quadriaxial woven fabric placed at the tip of the shaft to improve stability, this shaft is also a good match for the UFO-DD head since it has been designed to reduce head vibration and enhance control performance.

## The ATTAS EZ 370 is 43 inches long!

The 43-inch model is now available, emphasizing the ease of swing and good directionality for golfers who swing the head of the club at high speeds.

## Heel round sole

## Deep center of gravity

The head consists of a combination of different materials: Duralumin with a low specific gravity (2.8 g/cm<sup>3</sup>) and stainless steel with a high specific gravity (7.9 g/cm<sup>3</sup>). By placing greater weight towards the back side of the head, the center of gravity is deepened to allow balls that roll more effectively to be hit.

## Choose by head type! **Red9/9** white back series

### Versatile type offering exceptional total performance

A horn-shaped alignment extending to the back of the head facilitates the production of a line to the target.

#### WB-013

Horn

### Automatic model offering a high level of tolerance

Stabilize your swing with an ultra-deep center of gravity. The trajectory of your swing will stay smooth even if the point of contact is off thanks to a design that provides for a high moment of inertia.

#### WB-012

Wide Box

### For golfers who have trouble with mid-range putting

A square shape and ladder-type alignment makes it easy to align the direction of the face.

#### WB-009

Box

### For golfers who have trouble with short-range putting

The small head makes it easy to get a proper feel for the club. For golfers who want to control the way the head moves.

#### WB-008

# 飛距離更新!!!

イエロー誕生

## kascoAce

The ultimate in initial velocity. Kasco's commitment will help you to hit the ball further than you have ever done before.

White

Yellow

### Demonstrates maximum initial speed

Tuned core resilience and cover hardness enhance initial ball speed, the most essential factor for yardage, to the limit of the specifications.

**Instantaneous conversion of impact energy to the flight of the ball!**

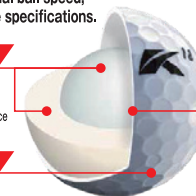

#### High-Rebound Dual Core

Adoption of a dual core with high restoration force increases the core resilience to the maximum. Controls and suppresses driver spin so the ball rises easily.

**Rises easily while not popping-up, and the force continues!**

#### Spark Dimple 272

Limited pop-up with increased forward force. Extended yardage even after the peak and less speed reduction even during the fall.

**Springs out softly so you can feel the flight!**

#### Highly resilient soft ionomer cover

Because core performance is high, the hardness of the cover has been tuned to control the potential of the initial ball speed, which exceeds the current regulations. Achieves a soft feel and long ball flight distance.

### kascoAce

3 piece ball	2 cores + 1 cover
Number of dimples	272
Optimum head speed	36~48m/s
Feeling / driver	Soft
Feeling / approach	Soft
Spin performance / driver	Less
Spin performance / approach	Medium
Trajectory	Mid-high
OWN NAME	Dozen
Pursuit of Distance Model	*Made in Japan

Feeling / approach	Extra-soft
Spin performance / driver	Less
Spin performance / approach	Much
Trajectory	Mid-high
OWN NAME	Dozen
*Ball number : 1-3-5	

\*Made in Japan

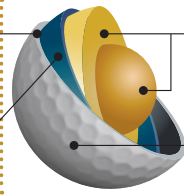

### High Brightness W-Cover

#### Soft ionomer cover

Delivers a soft feel as your club hits the ball and high-spin performance for approach shots.

#### High-rebound cover with bright materials

Provides enhanced rebound performance and less excessive spin when launched with a driver.

### Highly elastic dual core

Delivers a soft feel as your club hits the ball and enhanced rebound performance. Launch the ball higher with a lower spin rate.

### Newly designed for a stronger trajectory and greater penetration Spark Dimple 272

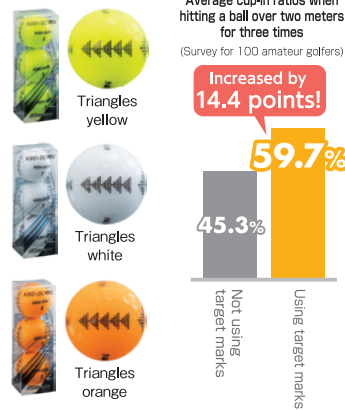

Accommodates a wide spin range and increases distance with a strong trajectory that extends from the peak.

# KIRA-BOON

The highest resilience within the rules that provide exciting flight performance  
With the target marks on the ball, 14.4 points improved cup-in ratio\*

KIRA Highest Resilience Model

\*Research by our company

\*One ball carries printed large, middle, and small arrows consisting of triangles. \*Own name service is not available.

### Easier image making, contributing to playing fast!

Small triangles are for better hitting direction for solid hitting. Large triangles are for solid hitting.

### Easier to focus on a target even when viewed from behind!

When viewed from the above: Three kinds of arrows consisting of triangles look as though connected. When viewed from behind: The triangles in the front allow you to check the direction.

### Highly resilient large-diameter dual core

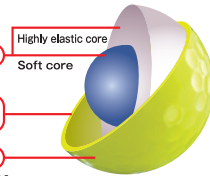

Highly elastic core

Soft core

### Highly bright and highly resilient ionomer cover

*Ball number: 1-2-3		

\*According to our own research

# KIRALINE PRACTICE

putter Practice balls

You can hit balls that roll exceptionally well. Savor the sense that you are hitting the ball through its center. Square-to-square strokes can be achieved.

**Weight 100g** Approximately double the weight of a regular ball.

Refrain from hitting the ball with too much force. Doing so may damage surrounding objects. Refrain from using with anything other than a putter.

KIRALINE PRACTICE White/Green KIRALINE PRACTICE Red/Blue

Also used by current professional golfers participating in regular LPGA Tour events

- Perfect for practicing short putts.
- Allows golfers to acquire a sense of what constitutes firm contact with the ball.
- Helps golfers avoid short putts that veer off course.
- Improves the quality of putts.

Weighing 100 grams each, these balls are double the weight of regular balls, which means that, if a ball is struck off-center of the putter, the head will become misaligned and cause the ball to veer off course. Get a feel for the weight of the ball and learn to consistently hit the ball with the center of the putter.

## KIRALINE PRACTICE

2 per pack \*Made in Japan \*Ball number: None

By setting up the ball with the boundary line between each color pointing in the direction of the cup and taking a stroke that traces this line, you can determine whether you are achieving proper square-to-square strokes. Endeavor to make sure that your strokes enable balls to roll in a straight line.

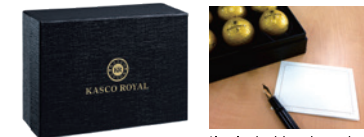

# KASCO ROYAL

Worthy of the name and shows the running performance and pure gold shine as well.

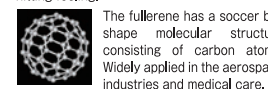

Fancy Box creating an elegant Japanese look with pongee feel

\*Included bookmarker/message card

Elastomer Core contains Nano-Fullerene

Awarded with the Nobel Prize in Chemistry <Fullerene> brings about the softer hitting feeling.

©Schematic Molecular Structure of Fullerene

High Trajectory Big Dimple 252

Realizing a high trajectory with Big Dimples

Highly resilient Core

Generates a high repulsion force and enhances the initial speed of the ball.

Pure Gold Coated High Repulsion Cover containing Lame

Controls excessive spinning and increases resilience. 24K Pure Gold Lame promotes premium impressions

Highly resilient ionomer cover

Further increases the initial speed of the ball with high resilience force.

High Density Core

Increased initial spin performance by the increased specific weight

**TOUGH FIT+** You may break your best score but your gloves will never break! Tough to break, good size lineup, resists bacteria and viruses, and slip-resistant.

### Perfect Fit for Increased Yardage

If the gloves fail to fit your hands, you can lose an average 1.6 m/s of head speed. The difference converted into yardage is approximately 10 yards.

- Japan-made artificial suede
- Right-hand gloves
- Larger size 27.28cm
- Cadet Short fingers
- 0.5cm Spin speed increase at 0.5cm increase
- Durability
- All weather
- Free-cut wrist
- Antibacterial Antiviral
- Anti-Odor

Suitable if your glove is loose at the fingertips.

- Size : (Left hand) Regular /21cm, 21.5cm, 22cm, 22.5cm, 23cm, 23.5cm, 24cm, 24.5cm, 25cm, 25.5cm, 26cm, 27cm, 28cm (Left hand) Cadet /21~26cm (Right hand) Regular /21~28cm
- Color : White, Black
- Material : Japan-made artificial suede (Belleseime Dry®) × Etak®
- Made in Thailand and Bangladesh (made in two countries)
- Belleseime Dry® is a registered trademark of KB Seiren, Ltd.

**TOUGH FIT+** Barriers to potential danger. No odor when you sweat. Long lasting cleanliness thanks to durability and antibacterial/antiviral treatment.

### LADIES

- Japan-made artificial suede
- Two-hand model available
- Durability
- All weather
- Free-cut wrist
- Antibacterial Antiviral
- Anti-Odor

### Tough Fit + Ladies'

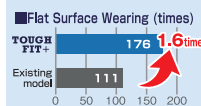

- SF-2116L (Left hand)
- SF-2116LW (Two hands)
- Size : 17~21cm
- Color : White, Black
- Material : Japan-made artificial suede (Belleseime Dry®) × Etak®
- Made in Thailand and Bangladesh (made in two countries)
- Belleseime Dry® is a registered trademark of KB Seiren, Ltd.

### Strong Fabric

You may break your best score but your gloves will never break.

Adoption of the KB Seiren Belleseime Dry® artificial suede offers excellent anti-wear and tearing strength properties. Provides stable durability unique to a material made in Japan.

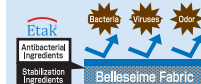

Increased durability with evolved Belleseime Dry®! No concerns over breakage during use!

### Strong to bacteria/viruses

Protection against potential dangers

The higher durability tends to increase the adhesion risk of bacteria and viruses. Tough-Fit+ provides a barrier to worrisome bacteria or viruses with the antibacterial/antiviral ingredient Etak®, which is impregnated and stabilized in the fabric. Furthermore, the treatment prevents offensive odors after use for extended periods from sweat.

Demonstrates excellent antibacterialeffect and washing durability! Offers a further long lasting effect! Use cleanly for extended periods without worry!

### Great lineup of sizes

Perfect Fitting, Increased Yardage

For prevention of lost yardage due to the gloves, the fine size lineup provides a solution to any concerns about sizes.

Resolves the concern on sizes!

First in Market Sizes offered with increments of 0.5 cm

- Size : (Left hand) Regular / 21~23cm, (Left hand) Cadet / 21~26cm, (Right hand) Regular / 21~26cm
- Color : White, Black
- Material : Pure Ethiopian sheep (Sheepskin)
- \*Made in Thailand

☆☆☆☆  
PURE ETHIOPIA SHEEP  
ビュアエチオピアシープ  
Pure Ethiopian sheep  
Abyssinian highland sheep bred in special environments are carefully selected and treated with special tanning. It has a fine texture, flexible, and soft. It fits your hand.

**Soft hook**  
Thin and tender soft hook is used. The glove can easily be attached or removed. It fits better on the back.

**Soft band**  
Leather material is pressed, and the band is thinner and softer.

**Free-cut wrist**  
Offers a more natural wrist movement and reduces discomfort when swinging.

You can't stop touching it. Skin-like texture is the selling point.

\*Leather surface is measured at 100X power.

<b>Pure Ethiopian sheep</b> Pores are small and the surface is flat. Tight, moist skin with a delicate texture.	<b>Normal sheep (other than Ethiopia)</b> Sweat glands are large and rough. The skin looks like thick and stiff.
--	---

# Perfect FIT

Security of gripping until hole out  
V-Cut 3D gloves provide a good hold without gripping

Supports a natural grip!

Less gripping load provided by the near grip hand shape as if gripped with bare hands will not require excessive force for holding as when using the typical gloves.

18% less gripping force than other gloves!  
No annoying wrinkles or seams when gripping!  
New Technology V-Cut 3D  
No gripping force is lost through the V-cut.

Looks smooth and fits perfectly!  
Provides a long lasting holding force!

Increased adhesion maximizes the grip and enhances non-slip performance as achieved with Fully-Flat + No-Slip processing. The high non-slip performance provides the appropriate gripping force without requiring an excessive grip, and the holding force lasts longer. Furthermore, the reduced inner non-slip processing applied to both outside and backside of fabric enhances the sense of unity with hands.

<Palm>

## ZUTTFIT®-X

ZUTTFIT®-X by Toyo Cloth for Palm. The original Kasco pattern is embossed on the artificial leather manufactured with a special process of Toyo Cloth, an epoch making material simultaneously featuring excellent non-slip performance, air permeability, durability and soft feeling.

Grippy anyway  
"Non-Slip Property"

High tackiness (cohesive) on both the grip side (outside) and the contact side (inside) insures an adsorbing good fit. Controls the inner sliding that may occur between the hand and the glove when gripping. Furthermore, the enhanced sticking with the dimples on the outside provides upgraded grip performance. Realizes stable gripping performance even in the rain or perspiration.

Long-preserved comfort  
"Permeability & Durability"

Proper thickness, excellent moisture/air permeability provides the comfort without dampness. With high wear resistance and excellent cost performance.

Want to keep feeling the texture.  
"Marshmallow Texture"

Marshmallow softness where you keep feeling the texture. Enjoy the new feeling of texture generated from an entirely new processing technology.

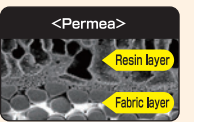

<Back>

## PARMIA®

All-weather!  
Comfortable  
without dampness!

"Permea GB" on the back side. Special processing on the surface of sponge soft layer, simultaneously air and moisture permeable, and always comfortable to use.

● Color : White/Navy blue, White/Light-grey  
● Material : Polyester  
\*Made in China

What is Radi-Cool radiative cooling fabric?

UV protection for peace of mind  
Blocks at least 95% of UV rays!  
Protects even in strong sunlight and is also ideal for helping to prevent heat stroke.

Water-repellent finish

Water is effectively repelled, meaning these hats can be worn with peace of mind even if it suddenly rains.  
\*Not waterproof.  
\*Mesh parts are not water repellent.

Item	Main body fabric
Solar reflectance	82%
Emissivity	90%
Transmittance of visible light	10%
UV shielding rate	>99%
Water pressure resistance	14000mm

\*Indicated values are obtained from measurements and are not guaranteed values.

高反発で、  
やさしく飛ばせる。

*Zeus impact*

High resilience + propulsive force = maximum distance!

2core + 1cover 3piece ball and Small

White Yellow Orange

**Coefficient of rebound of 0.85!**

These balls have a coefficient of rebound of 0.85 (125 ft/s), which far exceeds the regulation value for official balls. The ball's initial velocity is further increased to achieve even greater flight distances along exceptionally straight trajectories.

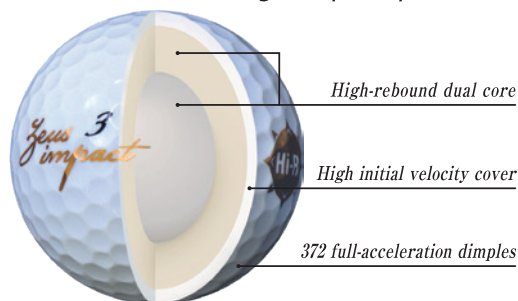

**2.0% less aerodynamic drag!**

Measuring 42 millimeters in diameter, these balls are small, which means that they give rise to less aerodynamic drag than regular-sized balls and are also better able to cut through headwinds!

**Featuring newly developed dimples!**

Propulsive force is increased thanks to the presence of 372 newly developed full-acceleration dimples.

With just the right amount of hardness, these made-in-Japan, 3-piece constructed balls feel great upon impact.

High-rebound dual core

High initial velocity cover

372 full-acceleration dimples

● Zeusimpact3 [Ball]

Construction	3 pieces (2 core parts + 1 cover)
Number of dimples	372
Optimal head speed	Full range
Feel	Soft
Spin	Normal
Ball type	Distance
Trajectory	Mid-to-high trajectory
Ball numbers	1, 3, 5

Construction: 2 core parts + 1 cover = 3-piece ball \*Made in Japan

**Unofficial balls** Cannot be used in competitions that are held in accordance with the R&A rules. For personal golf play only.

Behold the flight of balls struck by women like never before! Achieve straight launches for distance thanks to the high rebound properties of these balls!

2core + 1cover 3piece ball and Small

Pearl white Pearl yellow Pearl pink

**Coefficient of rebound of 0.85!**

These balls have a coefficient of rebound of 0.85 (125 ft/s), which far exceeds the regulation value for official balls. The ball's initial velocity is further increased to achieve even greater flight distances along exceptionally straight trajectories.

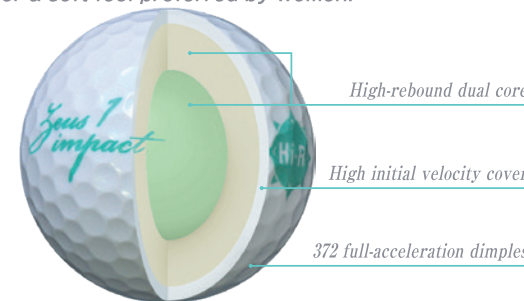

**2.0% less aerodynamic drag!**

Measuring 42 millimeters in diameter, these balls are small, which means that they give rise to less aerodynamic drag than regular-sized balls and are also better able to cut through headwinds!

**Designed specifically for women**

Made lighter in line with the speed of a woman's swing (head speed).

These made-in-Japan, 3-piece constructed balls deliver a soft feel preferred by women.

High-rebound dual core

High initial velocity cover

372 full-acceleration dimples

● Zeusimpact Ladies 3 [Ball]

Construction	3 pieces (2 core parts + 1 cover)

## D-MAX HOLLOW BODY CAVITY FORGED IRON

IRON HEAD

Taiwan Limited Model

各位喜歡KASCO的球友久等了！  
我們全系列產品進行了史無前例的改版，  
可以說是KASCO 2.0的登場！

首發的D-MAX IRON即採用  
S20C鍛造桿面與中空設計。  
背面更加上TUNGSTEN(鎢鋼)配重，  
增加了底部與內側的重量，  
不是一味的遠，而是多了控制性！

D-MAX HOLLOW BODY CAVITY FORGED IRON

Club weight (g)	254	261	268	276	284	292	294
Head material	Face : CNC MILLING + LASER MILLING BODY : S20C FORGED						

\*Conforms to 2010 new groove regulations

\*Made in China

## D-MAX FORGED WEDGE

WEDGE HEAD

Taiwan Limited Model

各位喜歡KASCO的球友久等了！  
我們全系列產品進行了史無前例的改版，  
可以說是KASCO 2.0的登場！

KASCO回歸到日本的職人精神：  
S15C鍛造桿頭與手工研磨。  
最受球友喜歡的髮絲紋也  
大量的運用在底部與桿頸，  
迷人的外型與手感兼具！

D-MAX FORGED WEDGE

Bounce (°)	8		10		8		
F.P.(mm)	5.1		5.2		5.0		
Club weight (g)	296	296	296	296	300	300	300
Head material	Face : CNC MILLING + LASER MILLING BODY : S15C FORGED						

\*Conforms to 2010 new groove regulations

\*Made in China

## Quality assurance of golf clubs

(Warranty period) Two years from the day of purchase.

(Warranty information) We will repair or replace the product free of charge according to our company rules if malfunctioning of and damage to the product occur while being used properly as specified in the golf club maintenance manual and handling instructions attached to your golf club upon purchase. Please bring the product with the warranty to the dealer of purchase should you have a problem.

<Repairs for a fee> Our warranty does not cover the following.

- Products purchased more than two years ago.
- Malfunctioning of and damage caused by the user either negligently or deliberately.
- Products repaired or modified by any party other than Kasco.

●Please make sure that you receive the warranty upon purchase that has the product name, the date of purchase, and the name of the dealer written on it.

●Please remember to keep the warranty, since we would not reissue it.

## Counterfeit warning

●It has been confirmed that counterfeit Kasco golf clubs have been circulating in internet shops and auction websites.

Such counterfeit products may be indistinguishable from real ones just by looking. However, their specifications and performance are different from genuine clubs, and their overall quality and safety are problematic, so there is a risk of causing accidents when using them.

●We are making efforts to counter this problem, such as requesting import suspension from Customs and by identifying and differentiating the manufacturers and distributors of counterfeit products. We would also urge our customers to take care not to purchase counterfeit products. We recommend purchasing golf clubs at reliable retailers.

●We will not be responsible for any damage caused by purchasing or using counterfeit golf clubs.

<How to distinguish genuine products from counterfeit ones>

1. A warranty is attached to genuine Kasco golf clubs.
2. The serial number is engraved on the neck of genuine Kasco golf clubs. (Figure 1)
3. An anti-counterfeit label recommended by the Japan Golf Goods Association (JGGA) is on the shaft of genuine Kasco golf clubs. (Figure 2 ~ 5)

Figure 2

Figure 3

Figure 4

Figure 5

## New groove-rule since 2010

●A new groove-rule has been implemented since January 1, 2010. General golfers can use golf clubs that conform to the previous rule valid until 2009 as conforming clubs at least until 2024. Until then, the use of clubs conforming to the new groove-rule will be required as part of competition rules only at some elite-level golf competitions, such as professional tours. (Please contact Kasco or our dealers for the details of the rule and for the information of each product.)

## Figures in this catalog

●The loft angles, lie angles, balances, head volume, and club weights provided in this catalog are design values based on the new measurement standard recommended by the JGGA (JGGA Measurement Standard). Actual measured values may slightly differ from the design values.

●Length of the clubs

Please refer to Figure 6 for the measurement standard.
